TECHNICAL MEMORANDUM 1.4.2: AVERAGE WORKER EARNINGS: NY, NJ AND CT

1.1 INTRODUCTION

This Technical Memorandum (TM) presents current and forecasted average worker earnings by employment type (basic, non-basic and total) for 28 counties in New York, New Jersey and Connecticut.¹ Basic employment is defined as employment located in detached office buildings, goods handling or industrial facilities, and regional retail centers, while non-basic employment consists of all other employment by place of establishment. It chiefly comprises population-serving activities in the public service sector, institutions, utilities, and smaller scale commercial concentrations. A weighted average of the wages earned in both the basic and non-basic sectors is presented as the total average worker earnings (summarized in Table 1 and Charts 1-6). Throughout the text, tables and charts, the basic, non-basic and total average worker earnings are provided in constant 2000 dollars at five-year intervals between 2000 and 2025.

While the summary table and charts present average worker earnings data on the county level, the Appendix provides these data on both county and census tract levels for the 5 counties (boroughs) in New York City, 7 suburban counties in New York State, Hudson county and Newark in New Jersey. Comparable data appear at the municipal level for 13 counties in New Jersey and 2 counties in Connecticut, or the geographical area inscribed within the zonal boundaries of the Best Practices and Land Use Models.²

This memorandum includes a discussion of the data sources and estimating methods used in determining county-level average worker earnings, followed by summary presentations of earnings data for 2000 through 2025. TM 1.4.2 concludes with a description of the work products accompanying this memorandum and the Appendix.

¹ The 28-county NYMTC study area in New York, New Jersey and Connecticut includes the following counties, by subregion: New York City: Bronx, Kings, New York, Richmond, and Queens; Long Island: Nassau and Suffolk; the Mid-Hudson Valley: Dutchess, Orange, Putnam, Rockland, and Westchester; New Jersey: Bergen, Essex, Hudson, Hunterdon, Mercer, Middlesex, Monmouth, Morris, Ocean, Passaic, Somerset, Sussex, Union, and Warren; and Connecticut: Fairfield and New Haven.

² As such, it excludes Sullivan and Ulster counties in New York, Mercer County in New Jersey, and Litchfield County in Connecticut.

1.2 METHODOLOGY AND DATA SOURCES

Average annual earnings are measured by state Departments of Labor from the monthly count of full- and part-time employees with earned wages as reported quarterly by employers covered by state unemployment compensation (ES-202). Jobs not covered by law fall mainly into the categories of self-employed and unpaid family workers, or certain agricultural and in-house domestic workers.

The 2000 data provided in this TM express the average annual earnings on a per worker basis, determined by dividing the average annual earnings by the total employment for each type (basic as the sum of office, industrial and regional retail; non-basic; and total). The 2000 employment, as well as employment information used to forecast the average worker earnings from 2005 to 2025, was obtained from TM 1.4.3, *Basic and Non-Basic Employment*. This TM estimates employment according to the “CTPP Worker” concept expressed in TMDI TM 8.41.7, *Current TAZ Employment and Earnings: NYC & NYS*, and TMDI TM 8.42.7, *Current MCD Employment and Earnings: NJ & CT*.

The employment data presented in TM 1.4.3 represent an update of basic and non-basic employment estimates provided for 1990 and 1996 in TMDI TM 8.41.2, *Floorspace, Zoning and FARs: NYC & NYS*, and TMDI TM 8.42.2, *Floorspace, Zoning & FARs: NJ & CT*. As part of this update, the impacts of the events of September 11, 2001 on regional employment, assessed in TM 3.1-3.2, *Inventory of Affected Businesses: Telephone and Mail Surveys of Affected Businesses*, have been incorporated into the adjusted 2002 employment as well as forecasted employment through 2025.

The 2000 average worker earnings by census tract or municipality are joined by earnings forecasted at five year intervals through 2025. These future earnings were determined by applying the industry-specific rates of change between intervals forecasted at the county level by the employment model, and presented in Appendix B tables of TM 1.3.2, *Employment Forecasting and Analysis*. Each county’s growth forecast in earnings for the industry components of basic and non-basic employment were applied to the respective 2000 zone level industry earnings and a weighted average of total, basic and non-basic earnings were derived. All forecasts are in constant year 2000 dollars.

1.3 EARNINGS FORECAST ANALYSIS

Table 1 shows county-level, average worker earnings data for 28 counties in New York, New Jersey and Connecticut between 2000 and 2025, while Charts 1-6 present snapshots of these data at each five-year interval. Both the table and charts are abstracted from the Appendix, which relates average worker earnings data at both county and tract levels.

An examination of the results collated in Table 1 and Charts 1-6 reveals considerable variation among counties in terms of total, basic and non-basic average worker

compensation, within the twenty-five year period. By far the highest earning counties are New York county, New York and Morris county, New Jersey. These counties show impressive growth over the period, exhibiting over 5 percent interval growth by 2010, and over 11 percent increases by 2020. Although their rate of growth is expected to fall to over 7 percent by 2025, their average worker earnings will continue to outpace all other counties' (with the exception of Fairfield county, Connecticut, which begins at a lower base) through the end of the forecasted period.

The growth in constant dollar earnings reflects both productivity increases and the change in a county's employment structure toward higher-paying, or lower-paying, industries. A few counties see virtual stability or modest declines, either sporadic or continuous, in average worker earnings through 2025. Most counties experience an increase, with 19 out of 28 seeing in excess of 5 percent growth between 2015 and 2020. This number drops to 3, namely the three strongest counties, New York, Morris, and Fairfield, by 2025, when much lower overall levels of wage growth are expected.

In addition to the constant dollar forecast shown in this memorandum, the excel files contain nominal dollar forecasts, or future average annual earnings not adjusted for inflation.
