

TRANSIT

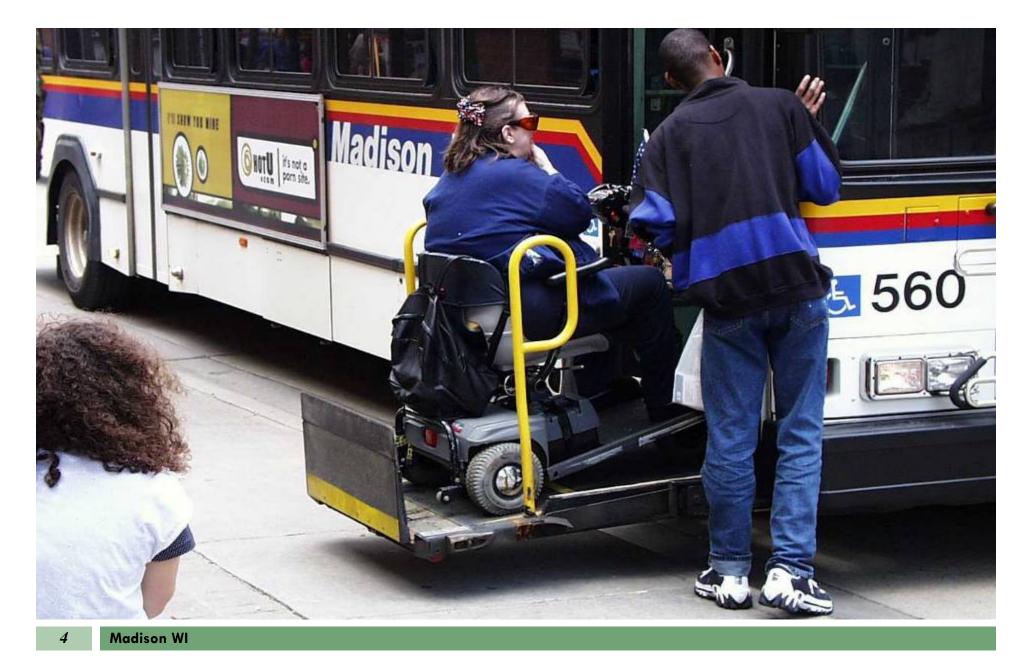

Learning Outcomes

At the end of this module, you will be able to:

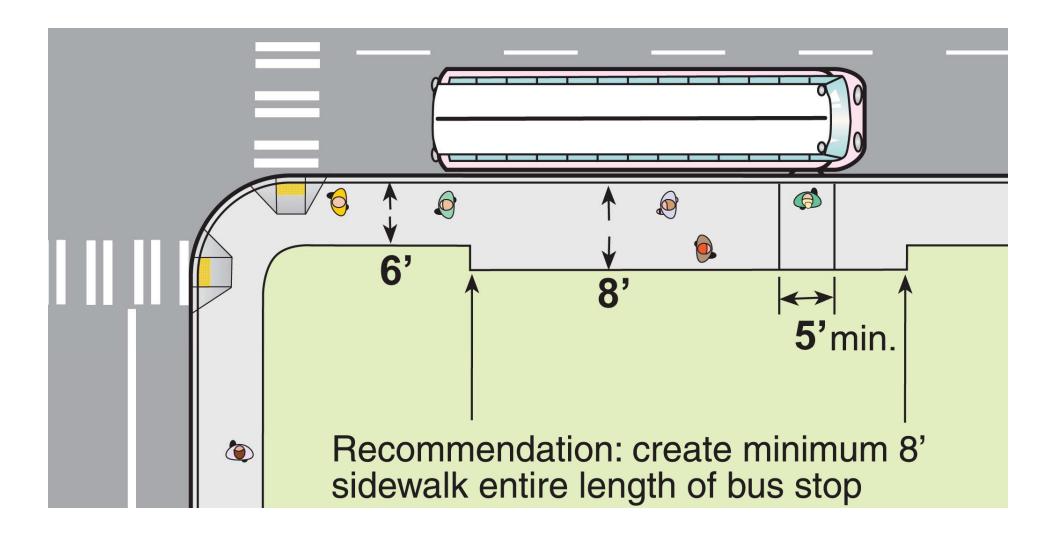

- Describe why transit stops must be convenient and accessible
- Apply techniques to help transit users cross the street at transit stops (many pedestrian crashes are associated with transit stops)
- Assess if transit operators concerns are met
- Assess the needs of other road users

Transit: Bus is most common mode

Transit: Only choice for many people

Sidewalks should be wide enough to provide space for waiting, boarding & passing.

Widen beyond ADA 5' X 8' minimum landing

Honolulu HI

Narrow curbside sidewalk provides insufficient space

Especially when bus comes & people board

6

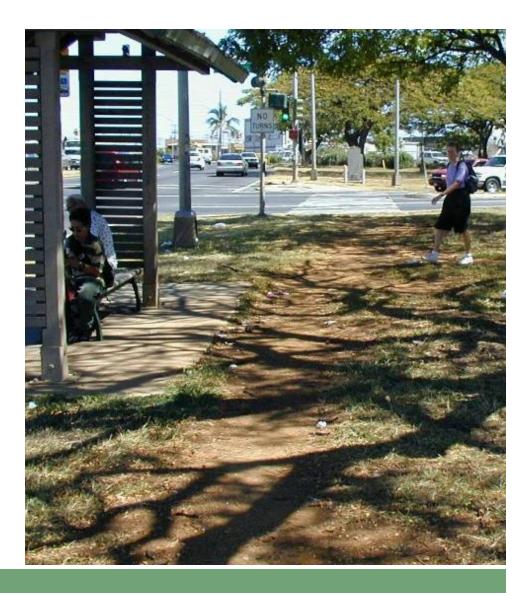

Wide sidewalk is full while people board, blocking access to other pedestrians, but empties out soon

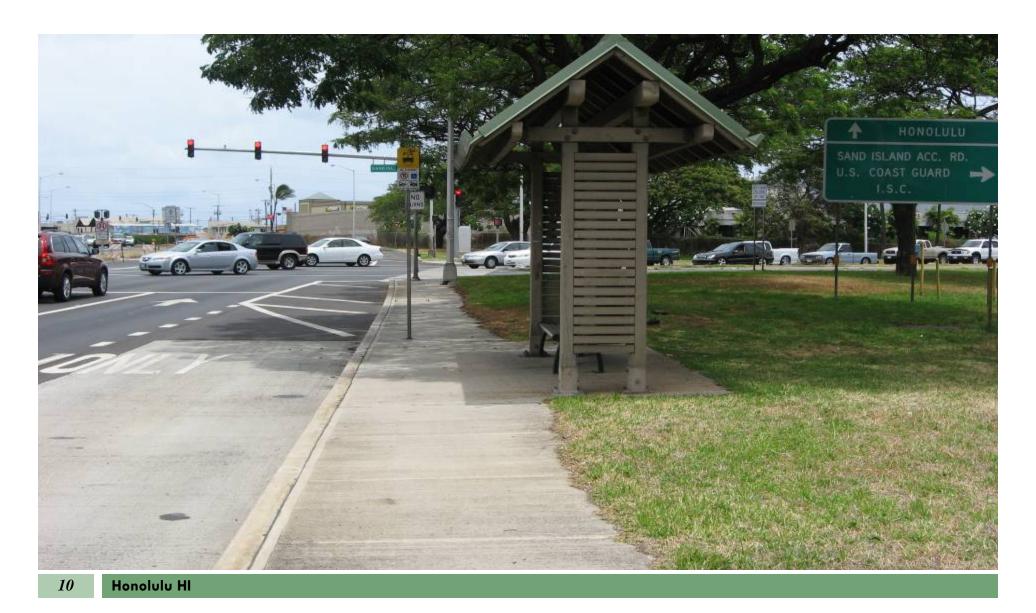

Bus shelter is an important amenity

Honolulu HI

Shelters must be accessible (grass makes it inaccessible)

Good news: they fixed it! (after attending this course)

Eugene OR

11

Separated sidewalk: Shelter placed in planter strip

Transit Safety & Operation Concerns:

- □ Pedestrian Crossings
 - Bus Stop Location
 - Bus Pullouts

University Place WA

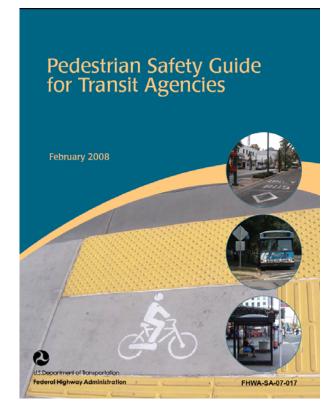

All previously discussed crossing techniques apply to transit stops

Pedestrian Safety Guide for Transit Agencies

Intended to provide transit agency staff and transit agency partners with an easy-to-use resource for

improving pedestrian safety.

Emphasizes the importance of solving pedestrian safety issues through partnerships between transit agencies and state and local transportation agencies municipalities, and consumer interest

Guide Includes

- Common pedestrian safety issues near transit stations, bus stops, and other transit facilities.
- Descriptions of specific engineering, education, and enforcement programs that have been effectively applied by transit agencies.
- Background information about pedestrian safety and access to transit.
- References to publications, guides and other tools that can be used to identify pedestrian safety problems.

Madison WI

Place crosswalks behind bus stop!

- 1. Peds can see traffic
- 2. Bus driver can move forward
- 3. Bus doesn't run over peds

Farside generally preferred at intersections because:

17 Salem OR

Bus Driver Concern: Farside or Nearside Stops?

- Driver can pull across intersection before light turns red
- Nearside can mean waiting an extra signal cycle
- □ Farside ensures pedestrians cross behind bus

Farside: Patrons cross behind

Nearside: Patrons cross in front

There are operational reasons to place stop nearside

Chcago IL

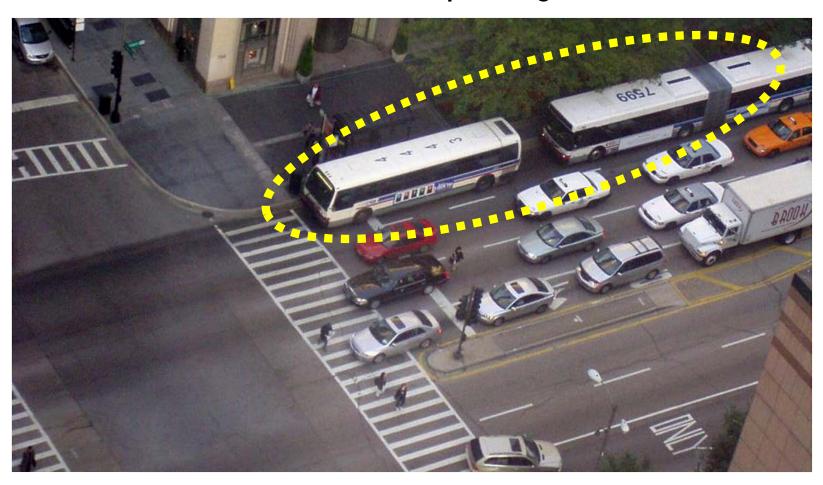

1. Bus user convenience

There are operational reasons to place stop nearside

Chicago IL

2. Nearside allows for bus queuing

There are operational reasons to place stop nearside

Salem OR

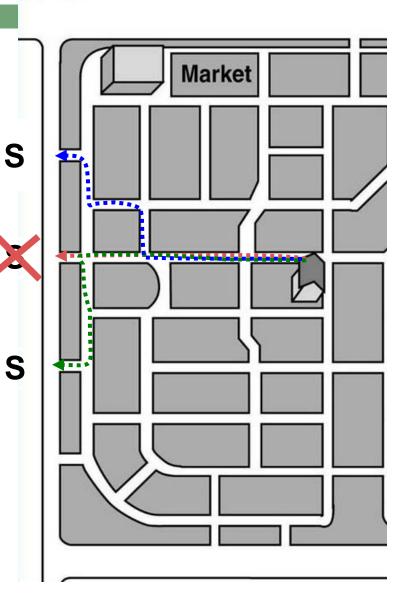

3. If bus makes a right turn

Moving, Eliminating, Consolidating Bus Stops

Considerations:

- Improve safety by placing bus stops near good crossings
- Adds walking time for users,
 but
- Reduces transit operator delay (fewer stops)
- □ Trade-offs:
 - 2-3 minute longer walk?
 - 10-15 minute shorter bus ride?

Salem OR

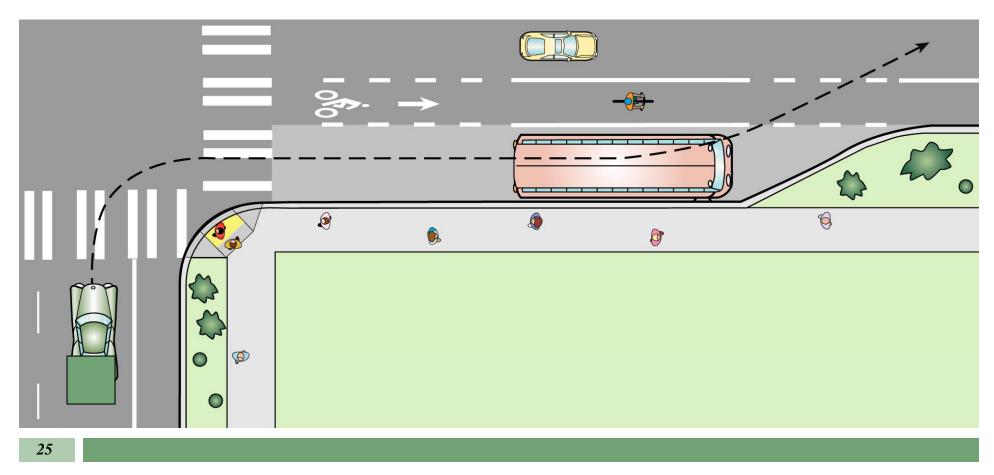

- They help traffic flow, but...
- Make it harder for bus drivers to reenter the traffic stream

Operational fix:

YIELD signs on buses (must be supported by law)

Bus pullouts must work for peds, cyclists & drivers

 A far side pullout can be used as an acceleration lane, endangering other users

Tigard OR

This far side pullout allows drivers make right turns at high speed, endangering pedestrians

Bus pullouts must work for peds, cyclists & drivers

- □ With curb extension, drivers will turn cautiously.
- Pedestrians and bicyclists are better served

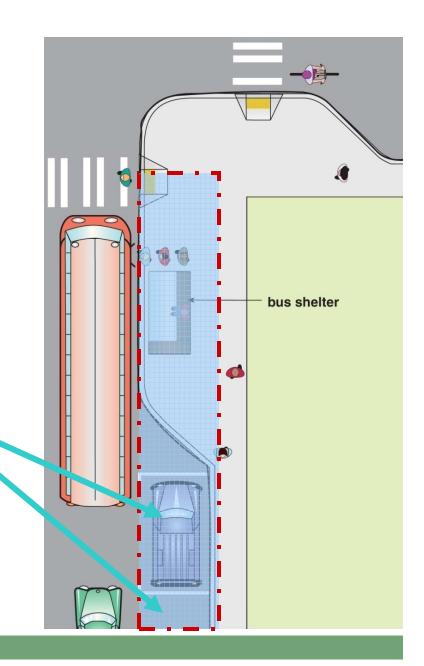

Albuquerque NM

Slows drivers making right-turn Protects pedestrians

On streets with on-street parking, "bus bulbout" retains parking spots.

These two spots would be prohibited if bus has to pull up to normal curb line.

Portland OR

- Bus bulbout reduces dwell time because the bus does not need to reenter traffic and patrons board rapidly
- 10 seconds saved per stop adds up to minutes over an entire route

Let's Recap

- □ What is the ped safety concern at every transit stop?
 - The need to safely cross the street
- What are the main consideration for transit stop location?
 - User convenience, accessibility, and safety
- □ What are some transit operators concerns?
 - The ability to move into traffic
- □ What are some other road users needs?
 - Pedestrians, bicyclists and motorists need to navigate safely around transit stops

Learning Outcomes:

You should now be able to:

- Describe why transit stops must be convenient and accessible
- Apply techniques to help transit users cross the street at transit stops (many pedestrian crashes are associated with transit stops)
- Assess if transit operators concerns are met
- Assess the needs of other road users
